

AUTOMATION DASHBOARD

AUTOMATE AND RESEARCH DATA

**SIMPLIFY THE PROCESS
WITH AUTOMATING AND
MONITORING PERFORMANCE**

[Get Started](#)

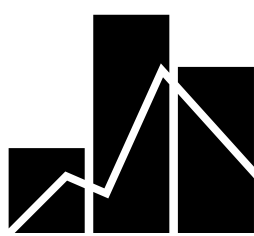

KEY FEATURES OF OUR DASHBOARD

Real-Time
Monitoring

Shows live sensor or machine data instantly for continuous system tracking.

Data
Visualization

Displays values using clean charts and gauges for quick analysis.

Alerts &
Notifications

Highlights abnormal conditions through color or warning icons.

ACTIVITY LOGS

Easy access to the activity log and can be download as csc files

System
Summary Panel

Gives an overview of active devices and key system parameters.

AUTOMATE PDF
GENERATION

GENERATE AND DOWNLOAD PDF OF
REPORT ANALYSIS

ABOUT US

We are a team of Third-Year B.Tech students specializing in Computer Science and Engineering (Artificial Intelligence).

This project — Industrial Automation Dashboard — is developed as part of our mini project to demonstrate the integration of data visualization, IoT, and automation concepts.

Our goal is to design a simple yet effective system that can monitor real-time data, display insights through visual charts, and enhance industrial efficiency. Through this project, we aim to gain practical understanding of how automation and AI can be applied to real-world industrial problems.

This dashboard showcases our technical skills in web development, IoT data handling, and intelligent system design, while representing the core idea of Industry 4.0 — smart, connected, and data-driven automation.
